

Cimarron Releases Kenda's Thunderstorm

CIMARRON FIREARMS AND REIGNING WORLD and National Cowboy Mounted Shooting Champion, Kenda Lenseigne have joined forces to introduce a series of firearms specifically designed for the mounted shooting sports.

The Thunderstorm series are factory-tuned models available to shooters in the Cimarron Model P and Thunderer configurations. The pistols are offered in 45 Colt with 3 1/2" and 4 3/4" barrels. Also part of the series is the 45 Colt, 18" barreled Model P revolving carbine.

The development of the new series came about in the beginning of 2010

Kenda Lenseigne's Cimarron Thunderstorm Model P

when Lenseigne and Cimarron owner, Mike Harvey collaborated during the Shot Show in Las Vegas.

One of the unique aspects of the guns is the new hammer design, which was created after an extensive study of a variety of lowered single action hammer styles, including the original Colt Bisley.

The Thunderstorm hammer offers a perfectly domed widened hammer spur and hand cut continuous cross hatch checkering. The collaborative design by Lenseigne and Harvey provide the shooter with a firm grip followed by a smooth and effortless release.

The Thunderstorm hammer is available separately and will fit any Cimarron single action manufactured in the past 20 years.

This is the second major component of mounted shooting that has been designed and influenced by Lenseigne. Her mounted shooting Kenda Lenseigne Saddle Series by Circle Y is the best selling mounted shooting saddle in the industry.

All three models of the Thunderstorm series are available through Cimarron and firearms dealers nationwide. Visit www.cimarron-firearms.com

The Thunderstorm is built on the Model P or Thunderer frame and features a unique hammer developed by Lenseigne and Cimarron owner, Mike Harvey.

The World's No 1 Hand Exerciser and Rehabilitation Device

The Xtensor® is the Newest and Most Innovative
Device for Upper Extremity Maintenance and Development Ever to Come to Market.
Stronger Hands Better Performance

The Xtensor works by strengthening the muscles that open the hands improving wrist strength and stability to improve performance for shooters on all levels. Whether you shoot competitively or for recreation exercising with the Xtensor will improve blood flow to the hands and wrists and counteract all of the gripping required for repetitive gripping sports activities.

"After experimenting with this device and its exercises, we found it to be a great physical tool for the fingers, hand, wrist and forearm. You can definitely feel the results."
